

POWERFLEX FOIL SYSTEM

NEW PERSPECTIVES FOR THE USE OF THE FOIL

FRUIT SECURITY[®]
SYSTEMS FOR PROFESSIONALS

POWERFLEX FOIL SYSTEM

The POWERFLEX Foil System opens new perspectives for the use of this foil!

The POWERFLEX Foil System is applicable for a wide variety of crops and purposes:

- Rain protection
- Insect protection
- Early or late crops
- Bird protection
- Blossom frost protection
- Winter frost protection
- Sun protection
- Plant protection etc.

Easy and quick handling when the foil is opened and closed!

Thus it is possible to open and close it several times during the season.

The POWERFLEX Foil System is perfectly applicable for anti hail netting!

POWERFLEX FOIL SYSTEM

Extremely solid fixation of the foil at the ridge by a new bold-clamp technique (no eyelets).

The approved bold-clamp technique in connection with bungy systems causes a firm and yet elastic positioning of the foil in the eaves.

Wiesel self-fixing fastener for fixing the foil for winter storage.

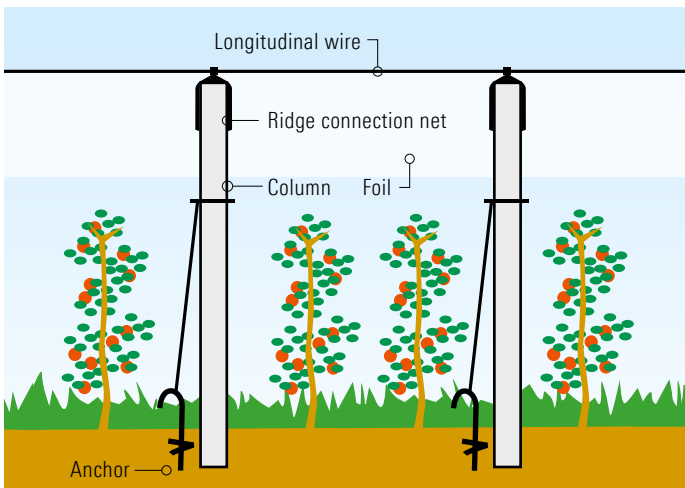

Extremely high wind stability due to an efficient combination of bungy systems, eaves wire and transverse bracing (solid upwards and elastic downwards).

- End-to-end foils do not have slits in the tree area and the ventilation is provided via the eaves.
- In connection with insect protection nets an efficient pest shield is ensured.

POWERFLEX FOIL SYSTEM

By anchoring the inner column, a very high wind stability is achieved.

The anchors make sure that the columns are not pulled up by the pull effect which, due to the wind, works on the foil.

- The winter storage of the foils is independent from the winter net storage.
- The foil can be opened and closed independently from the net.
- Easy and quick handling when opening and closing the net and foil.

- Edge support or arch system.
- Perfect space allowance for the edge row, too.
- Exact and wind resistant edge of the foil and hail protection net.
- On request to the ground as well, for an ideal protection against birds and insects.
